

Are you aware that Mediacom's high-capacity fiber optic network can deliver Gigabit speeds to businesses in your area?

Dear Emmetsburg Neighbors and Friends:

For more than a decade, Mediacom Communications has been building out a fiber-optic network infrastructure and using our cable exclusive DOCSIS technology to provide data, voice and video services to power the economic growth of cities like Emmetsburg. Our flexible, scalable network is delivering advanced broadband connections of well over a Gigabit to educational, medical and municipal institutions across the country.

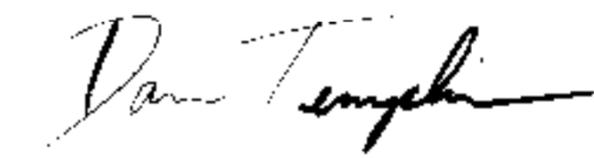

There is a lot of buzz around the data infrastructure space today. There are many misperceptions about fiber networks as well. In the rush to become the next "Fiber City" or "Gigabit City," some believe that a high-capacity fiber network has to be built from the ground up, or they overlook or underestimate the logistical challenges of managing a sophisticated communications network.

Offering the type of advanced fiber network that will attract new industries to your community, and with them new jobs and revenues, is essential for the future. Working with Mediacom to take advantage of the infrastructure that is in place and in use right now is the most effective path to achieving that goal.

Mediacom already participates in the "Gigabit" environment and is ready to bring the benefits of ultra-high capacity connectivity to your local businesses, healthcare facilities or schools. We believe in the power of broadband, and our investment over the past 10 years in the same "future" networks that are in the news, reflects that belief.

Let's work together to leverage our investment and expertise in fiber networks to your community's advantage. To speak with a Mediacom Representative, please email info@mediacomcc.com.

Sincerely,

Dan Templin
Senior Vice President
